

Observability with OTel and Grafana

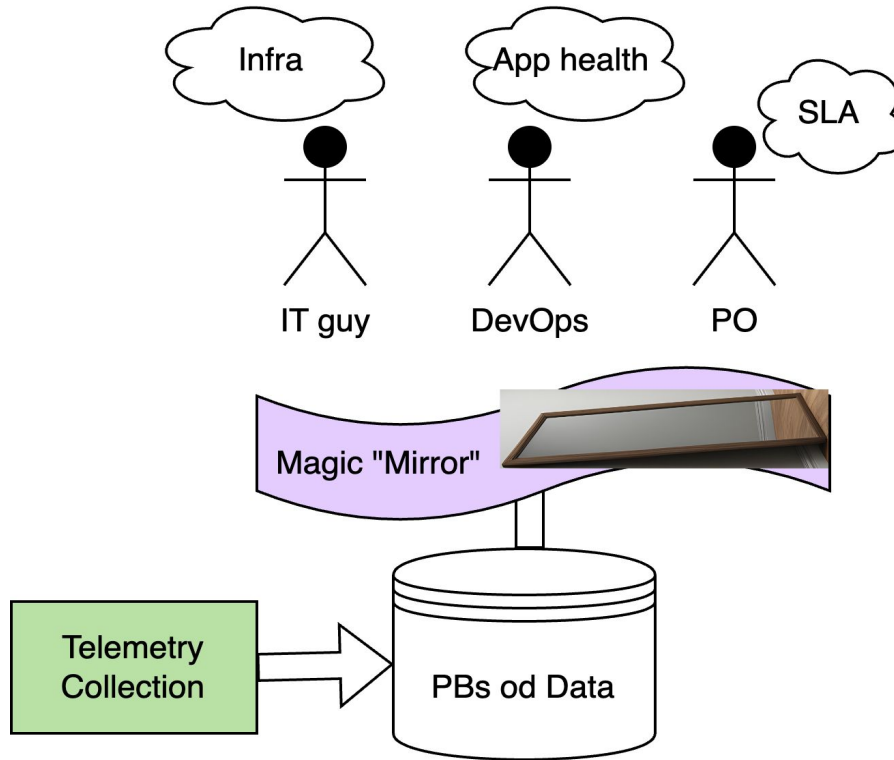

Nadya Shakhat

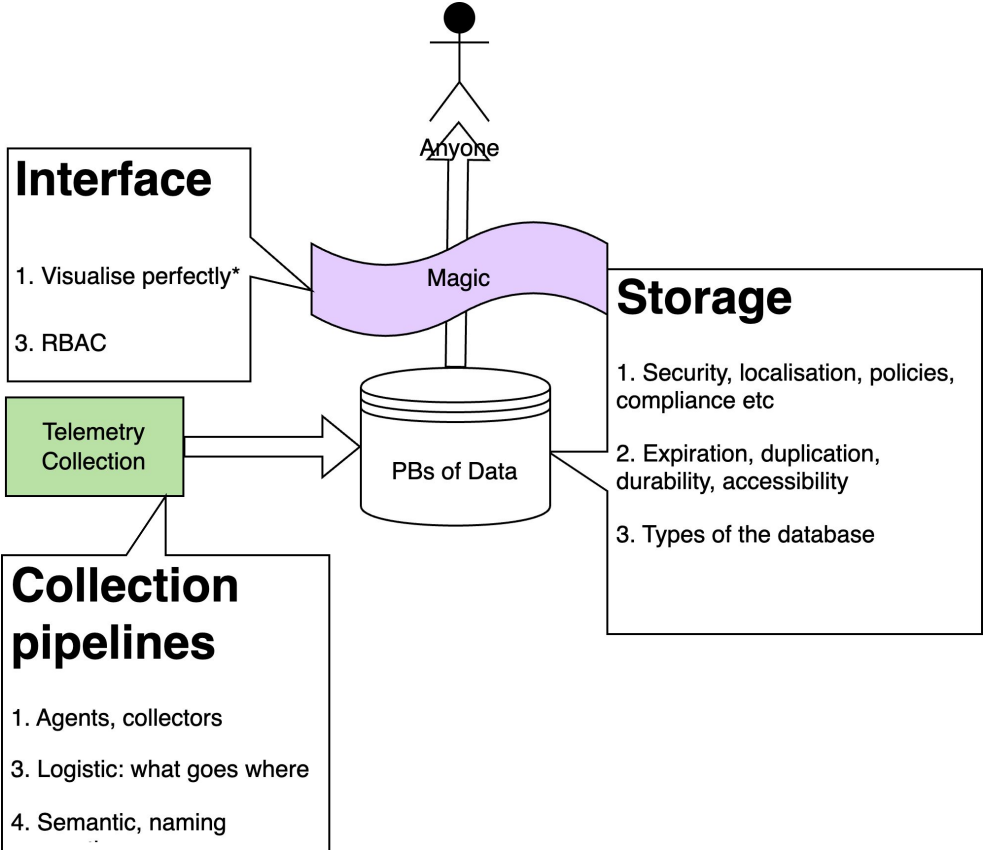

Very high level

Little bit lower

OpenTelemetry

Key components:

- SDK, API
- Agents/Collectors

Key conceptual components:

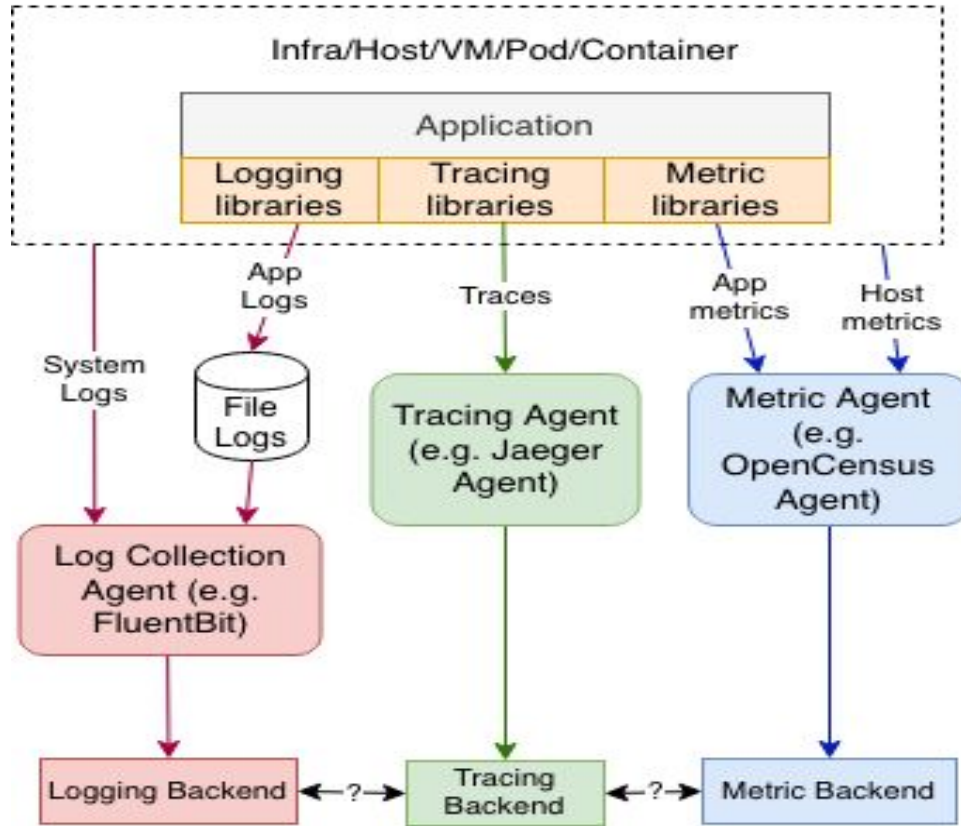

- Standardisation
- Semantic conventions
- OTLP protocol

Challenges in OpenTelemetry Adoption

- Protocol Integration and Compatibility
- Scalability and Efficiency
- Complex Configuration Management:
- Minimizing Performance Impact
- Staying Up-to-date with Community Developments

Example architecture

Example architecture

ETL vs ELT in Observability

Might **ELT** be achieved with:

Compression

Batching

+ Other sampling and filtering techniques

?
